Aaron Carney

BIO

University graduate with experience in Web Development, highly motivated with a positive approach to given tasks, a constant thirst for accomplishment and always eager to learn new abilities by partaking in new challenges.

Experienced with a variety of technologies and worked on a range of projects.

Coming towards the end of a temporary contract at Edward Robertson where I gained valuable experience in a fast-paced environment delivering a range of website features, fixing bugs, dealing with clients and working as a team as well as independently.

SKILLS

PHP	Java	Jquery
MySQL	Web Development	Database Development
C++	Laravel MVC Framework	Team Management Experience

EDUCATION

University of Huddersfield

Masters Certificate
Advanced Computer Science - 2018

Bachelors Degree (2nd)
Computer Science - 2017

WORK EXPERIENCE - Edward Robertson

Bulk Product Importer & Product Exporter

Worked on a complex data importer that allowed the client to bulk insert products for their websites. The client could export a spreadsheet via the admin to then add and update products by simply editing the exported file and then uploading it back to the admin to import new products and update existing ones.

Disc Data Import Script

The Client sent a disc with over 600000 rows of data, the data on this disc had to be exported to a spreadsheet so it could then be imported to the website, making sure to skip products that already existed, create new categories and brands for new products and ensure data is correctly structured so the front end of the site could display them.

UNIVERSITY PROJECTS

Team Leader Robotics Marketing Activity

Leader of a small team tasked with designing and developing a marketing activity featuring robotics to attract the attention of potential students. Team leader roles include ensuring team is working effectively, arranging weekly meetings, distributing tasks to team via Trello and maintaining communication on Slack.

Film Rental Managment System (SQL/PHP/HTML)

A web application written in PHP/HTML that allows users to manage rentals for a video shop. The application fetches and displays data from a database, allowing users to handle rentals, returns and payments. Each transaction updates the database with new touples and alters applicable data fields using SQL statements.

INTERESTS

I very much enjoy upgrading and modifying mine as well as other peoples computers, purchasing and installing new hardware to improve on the computers performance. I also enjoy having friends around for social activities such as watching movies, series or playing video games.
